Re: Interaction with Vision Committee

As a follow-up to our conversation with [REDACTED] last month, I should like to suggest a possible means of implementing our discussion. The Vision Committee operates primarily through working groups which deal with very specific problems such as two-dimensional displays, standards, high hazards, etc. Under this framework, it would be reasonable to form a working group on image evaluation which would in turn serve as a group to which problems in this area could be referred for further study and recommendations.

STAT

Some years ago, I served on the display working group. We met several times a year, usually in locations where display technology could be observed, such as the Air Defense Center in Colorado Springs. Various speakers addressed the group on specialty topics and we in turn made recommendations to the military both as memos and as long-term reports regarding display problems.

From my experience, I think a working group on image evaluation would be an excellent way to make optimum use of the resources of the Vision Committee.
